

## UKEEP – CONSULTANCY SERVICES FOR THE EBRD UKRAINIAN ENERGY EFFICIENCY PROGRAMME

**Client:**

EBRD – European Bank for Reconstruction and Development

**Country:**

Ukraine

**Duration:**

from January 2009 to January 2012

**Services:**

Energy efficiency analyses, building physics and emission analyses, technical efficiency studies, technical consultancy and project coordination, market studies, verification of compliance with legal standards

**Project objectives**

EBRD attaches great importance to investments in the industrial sector which increase both energy efficiency and the use of renewable energy sources in Ukrainian industrial plants with the aim of reducing the excessive energy consumption in private enterprises and of strengthening their economic viability.

**Project description**

UKEEP is a credit line developed by EBRD to support private Ukrainian companies in the implementation of energy efficiency measures. The consortium, led by iC, supports the bank in carrying out the project.

**Project data**

Number of companies assessed: 22

Energy saving potential: gas: 1,000 GWh, electricity: 99 GWh, CO<sub>2</sub>: 8 million tons.

Industrial sectors: paper, food, construction material, electrical industry, glass, mechanical engineering, cement.

**Project specifics**

This project implemented in Europe's largest country demands a high degree of flexibility, professionalism and technical competence. Two investments recommended by iC have received the Ukrainian Energy Efficiency Award.

**Services**

Technical and financial project analysis, energy efficiency audits and CO<sub>2</sub> emission analysis.
