

FEACAL MANAGEMENT ENTERPRISES (FAME) - PROVIDING SANITATION SOLUTIONS THROUGH VALUE CHAIN MANAGEMENT OF FAECAL SLUDGE

Client:

Swiss Agency for Development and Cooperation

Country:

Switzerland, Uganda, Senegal, Ghana

Duration:

from April 2011 to March 2014

Services:

Consulting, Research

Project objectives

The overall goal of the FaME project was demonstrating innovative solutions for faecal sludge management and the entire faecal sludge value chain with the aim of dramatically improving public and environmental health in urban areas, peri-urban areas and informal settlements of Uganda, Ghana and Senegal. The purpose of the FaME project was to create scalable reuse-oriented faecal sludge value chains.

Project description

The FaME project envisions a future where urban settlements, and particularly the urban poor, realize the public health and environmental benefits that are known to be associated with reliable and complete sanitation

Project data

-

Project specifics

EU financed research project

Services

Conducting field research with extensive consultations of public and private stakeholders; Financial assessment of technical options of industrial end-use of dried faecal sludge; Profiling of existing businesses and assessment of economic and financial management practices; Preparation of re-use based financial model including potential relationships between end users; Formulation on policy recommendations on policy responses in order to stimulate the market for faecal sludge use
